MISCELLANEOUS STATISTICS.

BANKS AND INSURANCE.

Among the evidences of prosperity and general accumulation of wealth in the United States, the multiplication of banks, with increased aggregate capital, is one of the most significant. When, as in this country has been generally the case, individual promises, representing produce and merchandise, and made available through the instrumentality of banks, are almost the sole means by which commodities pass from the producers to the consumers, the increased action of the banks becomes the index of larger production and more active trade. Where crops and the products of manufacturing industry are more abundant, the aggregate amount of paper created by their interchange is larger, and the negotiations of this paper require greater banking facilities. This want usually manifests itself in a more lucrative banking business, which draws more capital into that employment. Such a state of affairs presented itself during the decade which closed with 1860. The bank movement in the United States during that period underwent great expansion without becoming less sound. In that respect it presented a strong contrast to the expansion that occurred in the decade which ended with 1840. In that period a season of speculation in bank stocks and wild lands manifested itself, and the paper created for bank negotiation represented imaginary or speculative values rather than commodities produced. Those values were never realized, and the whole paper system based on them collapsed. If we compare the aggregate features of the banks at each decade with the population and the sum of the imports and exports for corresponding dates, the results are as follows:

YEARS.	No. of banks.	Capital.	Loans.	Specie.	Circulation.	Import and export.	Population.
1830.....	330	\$145, 192, 268	\$200, 451, 214	\$22, 114, 917	\$61, 323, 898	\$144, 726, 428	12, 866, 020
1840.....	901	358, 442, 692	462, 896, 523	33, 105, 155	106, 968, 572	239, 227, 465	17, 069, 453
1843.....	691	228, 861, 048	254, 544, 937	33, 505, 806	58, 563, 608	149, 090, 279
1850.....	872	227, 469, 074	412, 607, 653	48, 677, 138	155, 012, 911	330, 037, 038	23, 191, 876
1860.....	1, 562	421, 880, 095	691, 945, 580	83, 594, 537	207, 102, 477	762, 288, 550	31, 445, 080

The year 1843 was that of the lowest depression after the extensive liquidation that followed the expansions of 1837-'39. In that year the bank credits were, however, large, as measured by the foreign trade or the sum of the imports and exports, but an internal trade had been developed through the settlements of the western country which required more credits. The operation of the general bankrupt law aided in clearing away the wreck of over two hundred banks that had failed, and which failures involved that of several sovereign States that had loaned their credits for bank capital.

The elements of prosperity were now again active, and banking facilities were required to a greater extent. The severe losses the public had suffered made some more comprehensive guarantee necessary to a full restoration of confidence in bank paper. In New York, in 1838, a new principle had been adopted—that of requiring the banks to deposit security for their circulating notes, and holding stockholders liable to an amount equal to the value of their shares. On this basis the banking of New York was thenceforth to operate; and the principle, as its value became recognized, was gradually adopted in other States.

The failure of the Irish harvests of 1846-'47, followed by those of England in 1848-'49, by creating a great demand for American breadstuffs, stimulated business and gave a new impulse to banking. The year 1850 showed an amount of foreign trade more than double that of 1843. With the increase of business the banks were very prosperous, as is manifest in the fact that, although the capital of the banks was no more in that year than in 1843, their discounts were one hundred and fifty millions, or 60 per cent. greater. Thus the decade opened with a very lucrative banking business, and amid the greatest excitement in relation to the gold discoveries of California. The spirit of enterprise abroad was very strong, and the impression that prices were to rise by reason of the depreciation of gold was prevalent; hence the general desire to operate, in order to avail of the anticipated profits. Industry of all descriptions was very active and productive, and there never was a period when the national capital accumulated so fast, a remarkable evidence of which was afforded in the vast amount expended in the construction of railroads; while, of the large capital accumulated, a considerable portion was employed in banking. The incorporated bank capital increased nearly two hundred millions, and the private bank capital half as much. The report of the Treasury Department gave the latter amount at \$118,036,080. The distribution of the incorporated banks among the several States (1850-1860) is exhibited by the following comparative statements, showing, by States, the number of banks, the capital, loans, specie, circulation, and deposits:

STATES.	SEVENTH CENSUS, 1850.					EIGHTH CENSUS, 1860.

The increase of bank capital was large in the Atlantic cities, particularly in Boston and New York, of which the number and capital were respectively as follows :

	1850.		1860.		INCREASE.	
	No.	Capital.	No.	Capital.	No.	Capital.
Boston.....	30	\$21,760,000	42	\$36,581,700	12	\$14,821,700
New York.....	31	33,600,602	55	69,758,777	24	36,158,175
Total of two cities.....	61	55,360,602	97	106,340,477	36	50,979,875

This increase of banks, following the general expansion of business, brought with it the necessity of some improved means of adjusting the daily mutual balances. The fifty-five banks of New York city, for example, were each compelled to settle as many accounts daily. To obviate that great labor the clearing system was devised. Each bank sends every morning to the clearing-house all the checks and demands it may have received the day previous, in the course of business, upon all others. These in a short time are interchanged, and a balance struck and paid. This system was established in 1853, and the amount of the exchange and balances annually were as follows :

YEARS.	Amount exchanged.	Balances.	YEARS.	Amount exchanged.	Balances.
1854.....	\$5,750,455,987 06	\$297,411,493	1859.....	\$6,448,005,956 01	\$363,924,682
1855.....	5,362,912,098 33	289,694,137	1860.....	7,231,143,056 69	308,693,488
1856.....	6,906,213,328 47	334,714,489	1861.....	5,915,742,758 05	353,383,944
1857.....	8,333,226,718 06	365,313,901	Total for eight years.....	50,704,364,288 76	2,627,434,991
1858.....	4,756,664,386 09	314,238,910			

With the development of business the transactions grew immensely up to 1858, when they fell off nearly one-half under the panic of that year. They recovered gradually up to the breaking out of the rebellion. The banks of Boston and Philadelphia adopted the same system with similar results. The figures indicate to what an extent the credits of individuals, created in the operations of business, are cancelled through the intervention of the banks of the cities where the commerce of the whole country centralizes.

In the States of Illinois, Mississippi, Arkansas, and Florida, after the collapse of 1837, no banks were again created up to 1850, and the three last named are still without them, with the exception of two small ones in Florida. Texas has a small bank at Galveston, and Utah, Oregon, and New Mexico have none. In the District of Columbia four old banks expired by limitation of charter in the hands of trustees, and Congress refused to recharter them, but they continued to transact business.*

It is probable that a large portion of the increase in banking, particularly at the west, has been due to the introduction of the security system of New York, the idea of which seemed to popularize that which had previously been in bad odor. The following table shows the States which have adopted the free banking principle in whole or in part:

STATES.	Year adopted.	1860.		STATES.	Year adopted.	1860.	
		Stocks held.	Circulation.			Stocks held.	Circulation.
New York.....	1838	\$26,897,874	\$29,959,506	Missouri.....	1856	\$725,670	\$7,584,885
Michigan.....	1849	192,831	222,197	Tennessee.....	1852	1,233,432	5,528,378
New Jersey.....	1850	962,911	4,811,832	Louisiana.....	1853	5,842,096	11,579,313
Virginia.....	1851	3,584,078	9,812,197	Iowa.....	1858	101,849	568,806
Illinois.....	1851	9,826,691	8,981,723	Minnesota.....	1858	50,000	50,000
Ohio.....	1851	2,153,552	7,983,889	Massachusetts.....	1859
Indiana.....	1852	1,349,466	5,390,246	Total.....	57,951,954	97,212,897
Wisconsin.....	1854	5,031,504	4,429,855				

The principle cannot be said to have worked well except in New York, where it required constant alterations for many years to bring it to perfection. In Illinois it was an entire failure, and the new constitutional convention adopted a clause looking to the prohibition of any more banks and to the suppression of the existing circulation.

INSURANCE.

The progress of insurance in the United States has been rapidly following the development of commerce and trade, of which it is the necessary accompaniment, since the system of buying and selling goods on credit necessitates the resort to every possible means of making those credits safe. None is more obvious than that of requiring all goods to be insured. It follows that as commodities increase in quantity and value, the amount to be covered by insurance must expand in the same proportion. Unfortunately, however, there have been no regular statistics collated from year to year, as in the case of banks, by which that interesting index to the growth of the national wealth might be compared. The State of Massachusetts has paid most attention to this matter, and the annual reports are very valuable. The number of companies and amounts at risk have been as follows in that State:

YEARS	Number of companies.	Capital stock.	Fire risks.	Marine risks.
1840.....	41	\$7,475,000	\$51,998,596	\$50,631,877
1850.....	30	6,106,875	63,943,273	76,082,529
1860.....	117	6,353,100	348,923,289	101,952,974

The total property at risk has increased in the ten years \$310,870,461. Under the present laws of New York the insurance returns are well organized. Taking the figures in connexion with those of the leading ones of other States, the results are as follows:

	Number of companies.	Capital and assets.	At risk.		Number of companies.	Capital and assets.	At risk.
New York.....	135	\$53,287,547	\$916,474,956	Charleston.....	2	\$17,291,600
Massachusetts.....	117	6,353,100	450,896,263	Augusta, Georgia.....	1	\$952,858	7,000,000
Connecticut.....	12	5,364,686	279,322,184	Jersey City.....	1	179,713	5,231,061
Rhode Island.....	6	2,419,688	32,187,104	Peoria, Illinois.....	1	363,995	6,806,377
Philadelphia.....	10	6,510,601	139,229,374	Total.....	2,105,538,319
New Orleans.....	9	6,738,031	221,100,000				

* In 1860.

The amount at risk by all the companies in the Union may approach three thousand millions, and the losses were reported as follows for 1860:

Vessels and freights.....	\$13,525,000
Cargoes.....	15,050,700
Total marine.....	28,575,700
By fire.....	22,020,000
Total losses.....	50,595,700

The number of United States life insurance companies is about 47; number of lives insured, 60,000; total amount insured, \$180,000,000; annual premiums, \$7,000,000.

VALUE OF REAL AND PERSONAL ESTATE.

The marshals of the United States were directed to obtain from the records of the States and Territories, respectively, an account of the value of real and personal estate as assessed for taxation. Instructions were given these officers to add the proper amount to the assessment, so that the return should represent as well the true or intrinsic value as the inadequate sum generally attached to property for taxable purposes. The result of this return by all the census takers will be found in table No. 2, whereby it will appear that the value of individual property in the States and Territories exceeds the sum of sixteen thousand millions of dollars, representing an increase of one hundred and twenty-six and a half per centum in ten years in value in the aggregate, and an increase of sixty-eight per cent. per capita of the free population. The rate of increase has been immense in the western States, while the absolute gain in the older States has been no less remarkable. For example, the rate of increase in Iowa has been more than nine hundred per cent., while the absolute increase of wealth has been two hundred and forty-seven millions of dollars; while Pennsylvania has increased at the rate of ninety-six per cent., with an absolute gain in wealth of near seven hundred millions of dollars. The wealth, per capita, of Iowa in 1850 was \$123, while in 1860 it amounted to \$366, a rate of increase of one hundred and ninety-seven and a half per cent. The wealth of Pennsylvania in 1850 per capita was \$312; in 1860 per capita was \$487; the rate of increase fifty-six per cent.

It must be borne in mind that the value of all taxable property was returned, including that of foreigners as well as natives, while all was omitted belonging to the States or United States. In considering the relation of population to wealth, the fact must be borne in mind that a much larger proportion of the property of the western than the eastern States is held by non-residents, and that this circumstance is not without its influence in exaggerating the wealth of individuals in States where large investments have been made by persons resident elsewhere.

The effect of internal improvements upon the prosperity and wealth of the country cannot be better illustrated than by the rapid enhancement in value of all property brought within their influence.

TABLE NO. 1.—The assessed value of Real Estate and Personal Property, according to the Eighth Census, 1860.

STATES AND TERRITORIES.	Real estate.	Personal property.	STATES AND TERRITORIES.	Real estate.	Personal property.

We next proceed to exhibit, in table No. 3, the valuation of real estate and personal property, as returned by individuals, in the States and Territories, (represented by counties,) on the 1st day of June, 1860, with a general summary of the United States, in which it will be perceived, comparatively with tables 1 and 2, that in 1860 the increase in real estate amounted to \$4,000,000, and in personal property to \$3,000,000, respectively, over the assessed value, (table No. 1,) and that the total increase in real estate and personal property, over that of the true value in table No. 2, amounted to \$3,000,000, from which comparison is deduced the fact that, in the whole United States, each man, woman, and child is represented in the sum of \$607.

The State of New York stands first in order in the total amount of real estate and personal property, as returned by individuals, giving the sum of \$2,316,743,547; Pennsylvania second, \$1,659,208,924; Ohio third, \$1,269,256,606; Virginia fourth, \$1,083,184,678; Illinois fifth, \$904,182,620; Tennessee sixth, \$838,452,354; Alabama seventh, \$792,274,199; Massachusetts eighth, \$769,651,672; Kentucky ninth, \$757,378,457; Mississippi tenth, \$754,900,768.

Among the older States, Delaware returns the smallest amount of real estate and personal property, being represented by \$73,592,747. Kansas, one of the States more recently admitted, makes the least return of all, \$30,866,933.

400000000

THE PUBLIC PRESS.

Among the elements which determine the characteristics of a people, no branch of social statistics occupies a more important place than that which exhibits the number, variety, and diffusion of newspapers and other periodicals. Composing, as they do, a part of the reading of all, they furnish nearly the whole of the reading which the greater number, whether from inclination or necessity, permit themselves to enjoy, and it was in virtue of this fact that the most philosophical of British statesmen signalized "newspaper circulations" as a more important instrument of the popular intelligence than was generally imagined in his day. The writers of these papers, he added, "are indeed, for the greater part, either unknown or in contempt, but they are like a battery in which the stroke of any one ball produces no effect, but the amount of continued repetition is decisive. Let us only suffer any person to tell us his story, morning and evening, but for a twelvemonth, and he will become our master."

And if such was the idea of Burke respecting the influence of the public press, it is equally true that the quality and the dissemination of its fugitive sheets may be said to stand as an exponent at once of the intelligence and the domestic economy of any people.

It was in this view that Lord John Russell, in his great speech on Parliamentary reform, delivered in the year 1822, cited the multiplication and improvement in newspapers as gratifying evidences of the augmented wealth and expanding culture of the middle classes in Great Britain. And it was in this view, also, that a great Greek scholar was accustomed to say that a single newspaper published in the age of Pericles (had that age produced any such phenomenon) would, if handed down to us, be a better index of Athenian life and manners than can now be found in any existing memorials of the Grecian civilization.

The newspaper and periodical press, now covering so wide a field of activity in every department of thought, has won its way to the commanding position it occupies from very small beginnings. Taking its origin in Italy, and under a form bearing some resemblance to that of modern times, capable of being traced to the sixteenth century, the newspaper has in our day enlarged equally the area of its diffusion and the character of its contents, while the celerity with which it is disseminated equalizes throughout large tracts of country the conditions of that popular intelligence which make up an enlightened public

opinion. The earliest English newspaper, entitled the "Mercurie," was little more than the present "Court Circular" in respect of its matter, while its periodical visits from London to York were, in the time of Cromwell, accomplished "in the brief space of a fortnight or three weeks."

At the present day the newspaper and the periodical have become "popular educators."

Instead of mere chronicles of formal proceedings or passing events, they are vast depositories of discussion and information on all topics which engage the thoughts or enlist the activity of men in the figure of society. A free press has thus become the representative and, for the masses, the organ of that free speech which is found indispensable to the development of truth, either in the religious, the political, the literary, or the scientific world. In each and all of these domains the newspaper and the periodical have accordingly become most efficient agents.

And in no country has their influence been more sensibly witnessed, or more widely extended, than in the United States. The universal diffusion of education, combining with the moderate prices at which the daily visits of the public press may be secured, has given to the newspaper a very great currency among us. And where so large a share of the popular activity is, from the very nature of our civil institutions, engrossed in social and political discussions, it is easy to predict that the public press must here ever exert a power which renders it mighty for good or for evil, according to the intelligence and the virtue of those who preside over its conduct.

The tabular statement appended to this report, relating to this subject, strikingly illustrates the fact that the people of the United States are peculiarly "a newspaper-reading nation," and serves to show how large a portion of their reading is political. Of 4,051 papers and periodicals published in the United States at the date of the census of 1860, three thousand two hundred and forty-two, or 80.02 per cent., were political in their character. Two hundred and ninety-eight, or 7.38 per cent., are devoted to literature. Religion and theology compose the province of two hundred and seventy-seven, or 6.83 per cent., while two hundred and thirty-four, or 5.77 per cent., are classed as miscellaneous.

The last decade in our civil history has been one of extraordinary political agitation. Accordingly we find that there has been a very large increase in the number of political papers and periodicals, as compared with corresponding publications at the date of the preceding census. In 1850 their number was 1,630. In 1860 it was 3,242, being an increase of nearly 100 per cent. In 1850 the number of religious papers and periodicals was 191. In 1860 it was stated at 277, being an increase of 45 per cent. In 1850 the number of papers and periodicals of every class in the United States was 2,526. In 1860 the aggregate under this head reaches, as before stated, 4,051, showing a rate of increase of 60.37. The total circulation of all kinds amounted in 1850 to 426,409,978 copies. In 1860 the annual circulation is stated at 927,951,548 copies, showing a ratio of increase of 117.61.

The total white population of the United States was stated at the date of the census of 1850 to be 19,553,114. In 1860 the census returns report it at 27,008,081, the ratio of increase being 38.12. These figures show how largely the increment of the newspaper and periodical circulation has exceeded the increase of population during the last ten years.

In 1850 the annual circulation of all kinds afforded 21.81 copies to each white person in the Union. In 1860 the total circulation was at the rate of 34.36 per person.

South Carolina is the only State which, as compared with the data of 1850, shows any considerable decline in the number of copies of papers and periodicals published within its limits. In the States of Maryland and Vermont, and in the District of Columbia, the emissions of the public press at the two dates are nearly uniform. The largest increase, as might have been expected, occurs in the State of California. Of the total circulation in the country, three States—New York, Pennsylvania, and Massachusetts—furnish 539,026,124 copies, or considerably more than half of the aggregate amount.

PROGRESS OF RAILROADS IN THE UNITED STATES FOR THE DECADE OF 1850-'60.

The decade which terminated in 1860 was particularly distinguished by the progress of railroads in the United States. At its commencement the total extent in operation was 8,588.79 miles, costing \$296,260,128; at its close, 30,598.77 miles, costing \$1,134,452,909; the increase in mileage having been 22,004.08 miles, and in cost of construction \$838,192,781.

While the increase in mileage was nearly 300 per cent., and the amount invested still greater, the consequences that have resulted from these works have been augmented in vastly greater ratio. Up to the commencement of the decade our railroads sustained only an unimportant relation to the internal commerce of the country. Nearly all the lines then in operation were local or isolated works, and neither in extent nor design had begun to be formed into that vast and connected system which, like a web, now covers every portion of our wide domain, enabling each work to contribute to the traffic and value of all, and supplying means of locomotion and a market, almost at his own door, for nearly every citizen of the United States.

Previous to the commencement of the last decade only one line of railroad had been completed between tide-water and the great interior basins of the country, the products of which now perform so important a part in our internal and foreign commerce. Even this line, formed by the several links that now compose the New York Central road, was restricted in the carriage of freight except on the payment of canal tolls, in addition to other charges for transportation, which restriction amounted to a virtual prohibition. The commerce resulting from our railroads consequently has been, with comparatively slight exceptions, a creation of the last decade.

The line next opened, and connecting the western system of lakes and rivers with tide-water, was that extending from Boston to Ogdensburg, composed of distinct links, the last of which was completed during 1850. The third was the New York and Erie, which was opened on the 22d of April, 1851. The fourth, in geographical order, was the Pennsylvania, which was completed in 1852, although its mountain division was not opened till 1854. Previous to this time its summit was overcome by a series of inclined planes, with stationary engines, constructed by the State. The fifth great line, the Baltimore and Ohio, was opened, in 1853, still further south. The Tennessee river, a tributary of the Mississippi, was reached, in 1850, by the Western and Atlantic railroad of Georgia, and the Mississippi itself, by the Memphis and Charleston railroad, in 1859. In the extreme north the Atlantic and St. Lawrence, now known as the Grand Trunk, was completed early in 1853. In 1858 the Virginia system was extended to a connexion with the Memphis and Charleston and with the Nashville and Chattanooga railroads.

The eight great works named, connecting the interior with the seaboard, are the trunks or base lines upon which is erected the vast system that now overspreads the whole country. They serve as outlets to the interior for its products, which would have little or no commercial value without improved highways, the cost of transportation over which does not equal one-tenth that over ordinary roads. The works named, assisted by the Erie canal, now afford ample means for the expeditious and cheap transportation of produce seeking eastern markets, and could, without being overtaxed, transport the entire surplus products of the interior.

Previous to 1850 by far the greater portion of railroads constructed were in the States bordering the Atlantic, and, as before remarked, were for the most part isolated lines, whose limited traffics were altogether local. Up to the date named, the internal commerce of the country was conducted almost entirely through *water* lines, natural and artificial, and over ordinary highways. The period of the settlement of California marks really the commencement of the new era in the physical progress of the United States. The vast quantities of gold it produced imparted new life and activity to every portion of the Union, particularly the western States, the people of which, at the commencement of 1850, were thoroughly aroused as to the value and importance of railroads. Each presented great facilities for the construction of such works, which promised to be almost equally productive. Enterprises were undertaken and speedily executed which have literally converted them into a net-work of lines, and secured their advantages to almost every farmer and producer.

The progress of these works in the aggregate, year by year, will be seen by the tabular statements at the close of the report. The only important line opened in the west, previous to 1850, was the one from Sandusky to Cincinnati, formed by the Mad River and Little Miami roads. But these pioneer works were rude, unsubstantial structures compared with the finished works of the present day, and were employed almost wholly in the transportation of passengers. Within the decade, in place of this one line, railroads have been constructed radiating from Lakes Erie and Michigan, striking the Mississippi at *ten* and the Ohio at *eight* different points, and serve as trunk lines between the two great hydrographic systems of the west. These trunk lines are cut every few miles by cross lines, which, in the States east of the Mississippi, are sufficiently numerous to meet every public and private want, and to afford every needful encouragement to the development of the resources of this country.

The southern States have been behind the northern in their public enterprises, though, at the date of the census, they were prosecuting them with great energy and vigor. The progress inland of the great trunk lines of the south has been already noted. The opening of the Mobile and Ohio, and of the Mississippi Central, which will soon take place, will give completeness to the system of the southwestern States, and leave little to be done to make it all that is wanted for that section of the country.

MISCELLANEOUS STATISTICS.

West of the Mississippi less has been done, for the reason that the settlements there are of a more recent date, and the people less able to provide the means for their construction than those of the older States. But even upon our western frontier extensive systems have been undertaken and very considerable progress made in their execution.

A more interesting subject than the progress of our public works would be their results, as shown in the increased commerce and wealth of the country. But such inquiries do not come within the scope of this report. It is well ascertained, however, that our railroads transport in the aggregate at least 850 tons of merchandise per annum to the mile of road in operation. Such a rate would give 26,000,000 tons as the total annual tonnage of railroads for the whole country. If we estimate the value of this tonnage at \$150 per ton, the aggregate value of the whole would be \$3,900,000,000. Vast as this commerce is, more than three-quarters of it has been created since 1850.

To illustrate the correctness of the estimate made, the following statement is added of the tonnage transported by the railroads of the State of New York for 1860, with the estimated value of the same. The classifications are made by the companies :

KINDS OF FREIGHT.	Tons carried.	Value per ton.	Total value.	KINDS OF FREIGHT.	Tons carried.	Value per ton.	Total value.
Products of the forest	373,424	\$20 00	\$7,468,480	Merchandise	783,811	\$500 00	\$391,905,500
Products of animals	895,519	200 00	179,103,800	Other articles	930,244	10 00	9,302,440
Vegetable food	1,103,640	50 00	55,182,000				
Other agricultural products	143,219	15 00	2,148,055	Total	4,741,773	163 00	773,089,275
Manufactures	511,916	250 00	127,979,000				

If we make a deduction of one-quarter for duplications—a portion of the tonnage passing over more than one road—the aggregate would be 3,556,330 tons, having a value of \$579,681,790.

The railroads of Massachusetts transported, for the same year, 4,094,369 tons; or, making the deductions for duplications, 3,070,027 tons, and having a value of \$500,524,201. The number of miles of railroad employed in the transportation of freight being 2,569 in the State of New York and 1,317 in the State of Massachusetts, with the deductions named, the amount of freight transported in these States averages 1,700 tons per mile. We have estimated the tonnage of all the railroads of the United States to average one-half the amount of the roads in these States. That this is not an overestimate is shown by the following statement of the tonnage of several interior lines :

ROADS.	Length of miles.	Tons transported.	ROADS.	Length of miles.	Tons transported.
Cleveland, Columbus, and Cincinnati	141	295,835	Chicago, Burlington, and Quincy	310	538,670
Little Miami	120	343,961	Chicago and Rock Island	228	301,663
Cleveland and Toledo	147	250,483	Galena and Chicago	259	381,188
Michigan Central	282	378,570			
Michigan Southern	525	398,619	Total	2,712	3,386,393
Illinois Central	700	496,390			

Average per mile, 1,250 tons

RAILROADS OF THE UNITED STATES.

325

A comparative statement of the extent of line completed, and the cost of construction and equipment thereof, in the years 1850 and 1860, respectively.

[In these tables, when a road is found to extend over two or more States, the length and cost are adjusted to the States accordingly. When, however, the length so overlapping does not exceed a few miles, the whole is given to the State in which the owners are domiciled.]
